The clinical study of Floratech® test formulation (CTL_16-070) was conducted on a panel of 25 healthy female subjects, ranging from 30 to 65 years of age (mean age = 48). The duration of the study was 2 days with single applications of each test article to the entire face, followed by a 3 minute dry down and liquid foundation application. The study was double-blind, and carried out under controlled temperature and humidity conditions. The total number of fine lines / wrinkles was measured using the BTBP Clarity® Pro Advanced and Facial Stage DM-3 (BrighTex Bio-Photonics, LLC) before and after foundation application. The inclusion of Floraesters K-20W Jojoba resulted in statistically significant better immediate coverage (p<0.05). (Clinical Study 16-070 - Phase I report available upon request.)
